Water content

Energy Balance Components

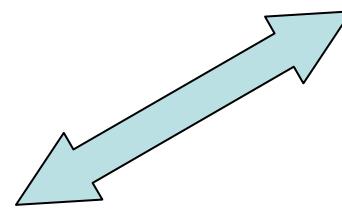

Water Balance Components

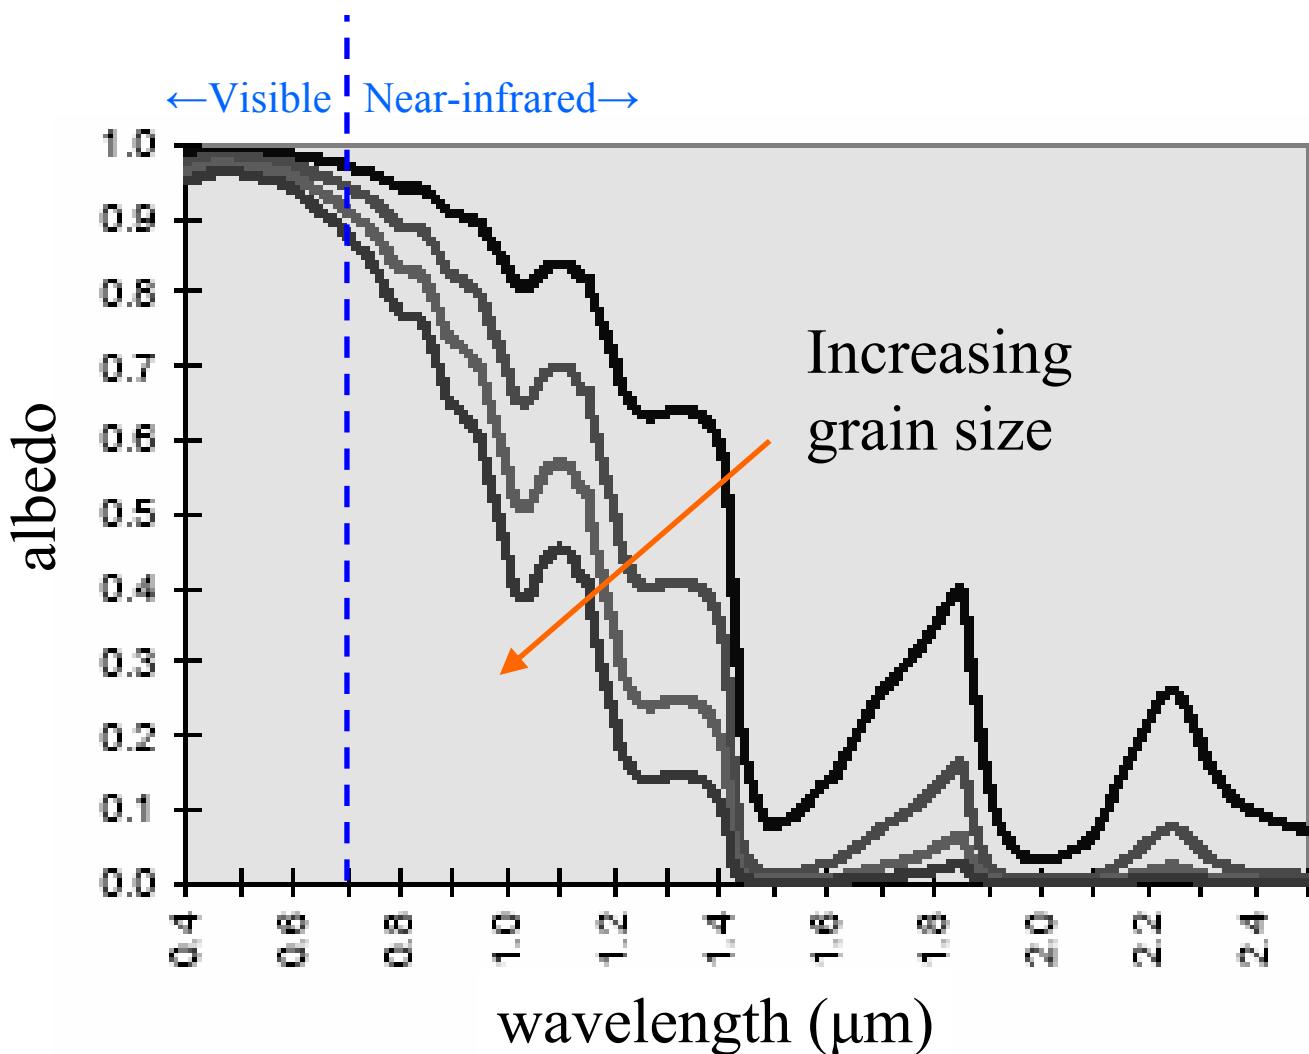

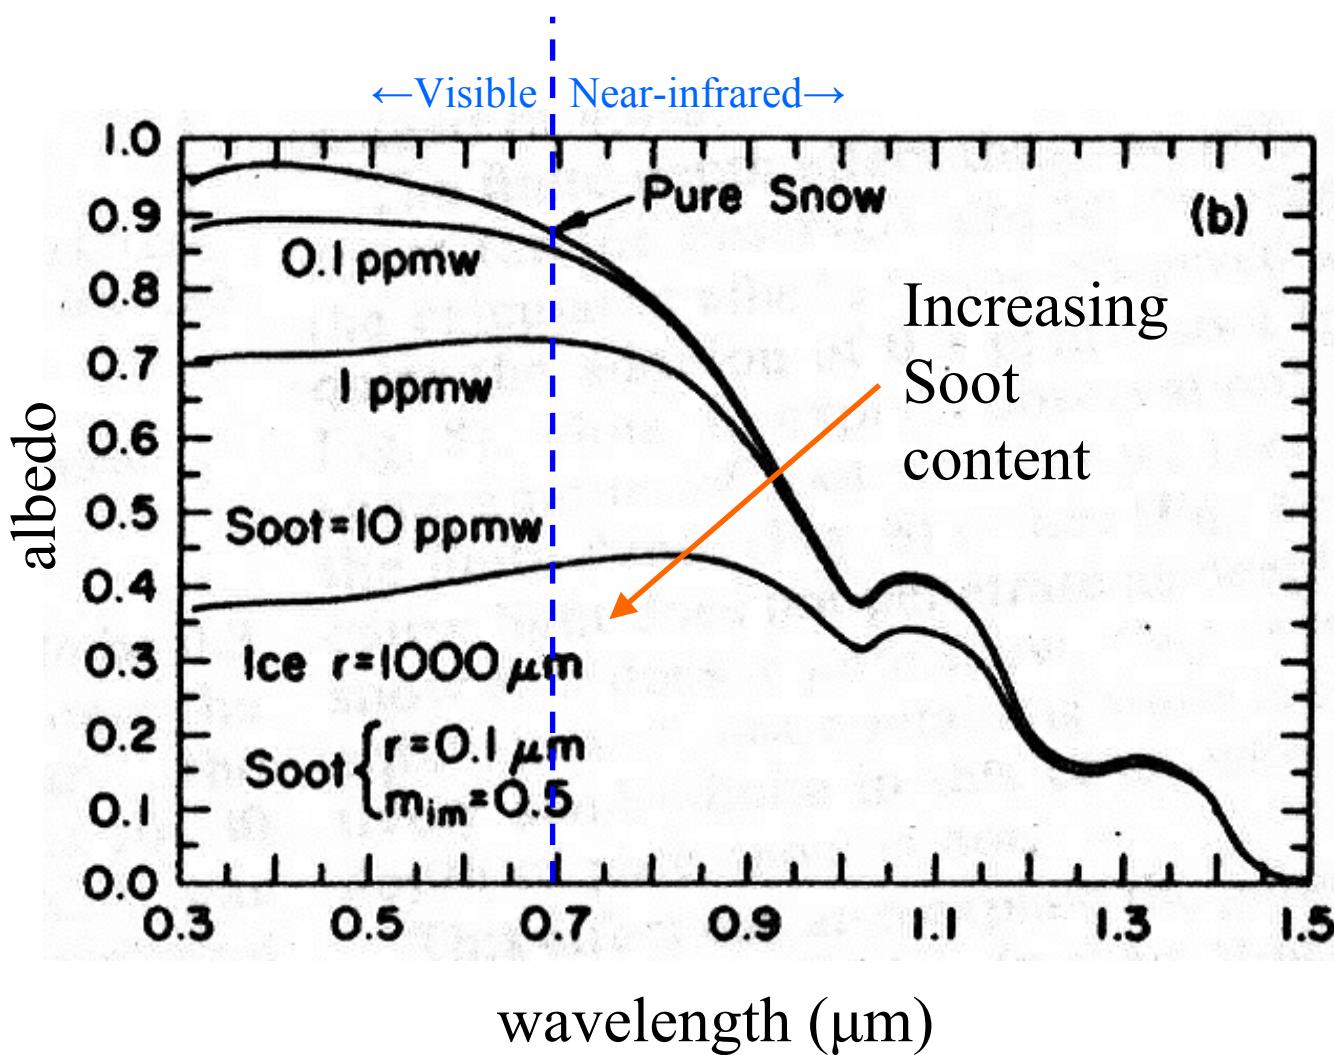

Energy and Mass Balance Equations

$$\frac{dU}{dt} = (1 - \alpha) SW_{\downarrow} + \varepsilon(LW_{\downarrow} - \sigma T^4) + Q_a - H - L_s E - L_f M$$

$$\frac{dM}{dt} = S_f - E - M$$

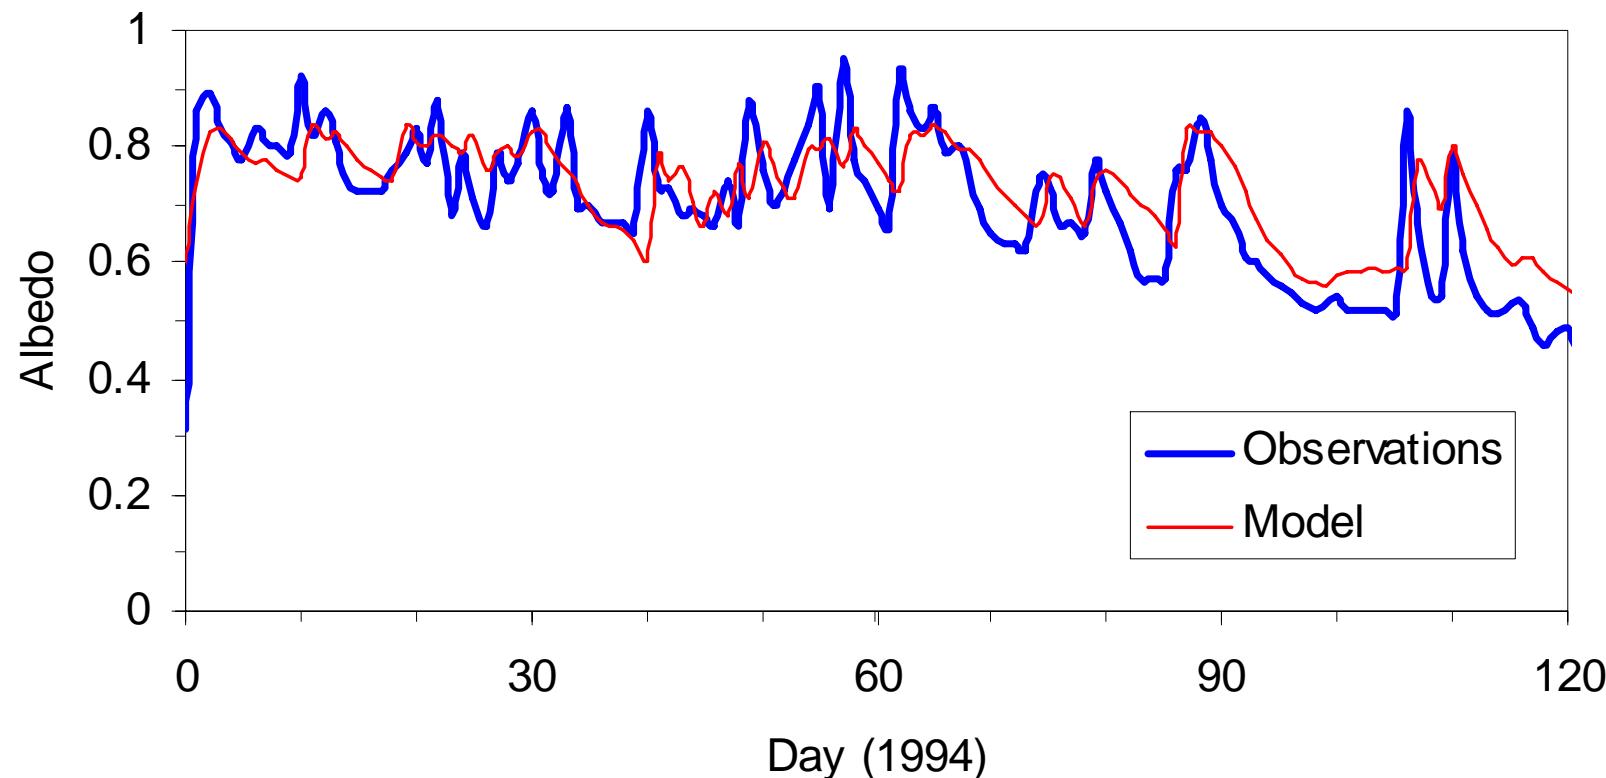

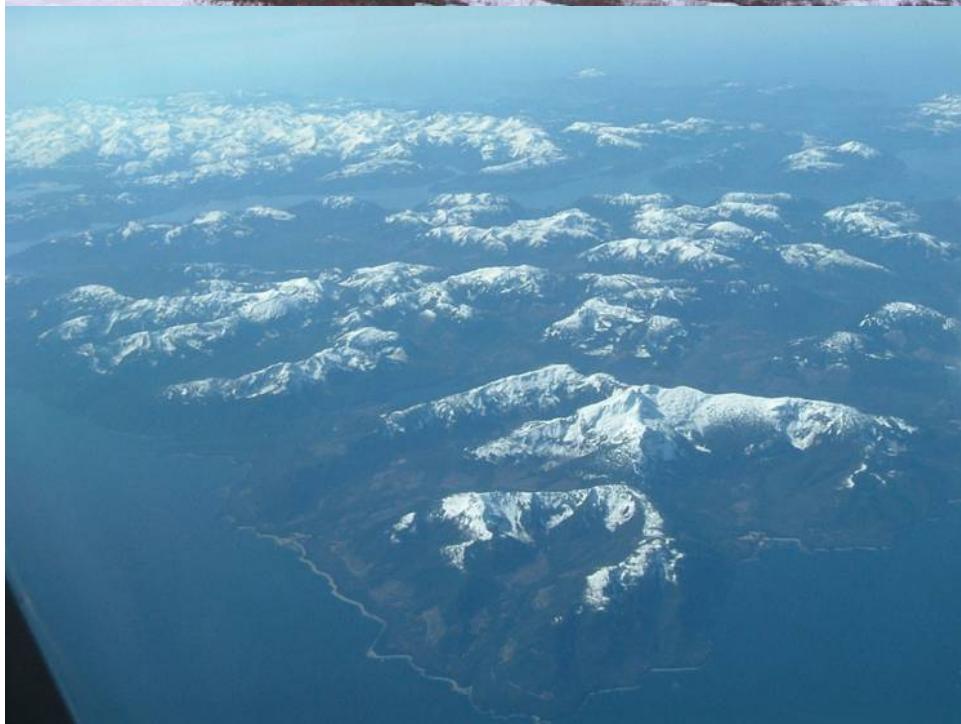

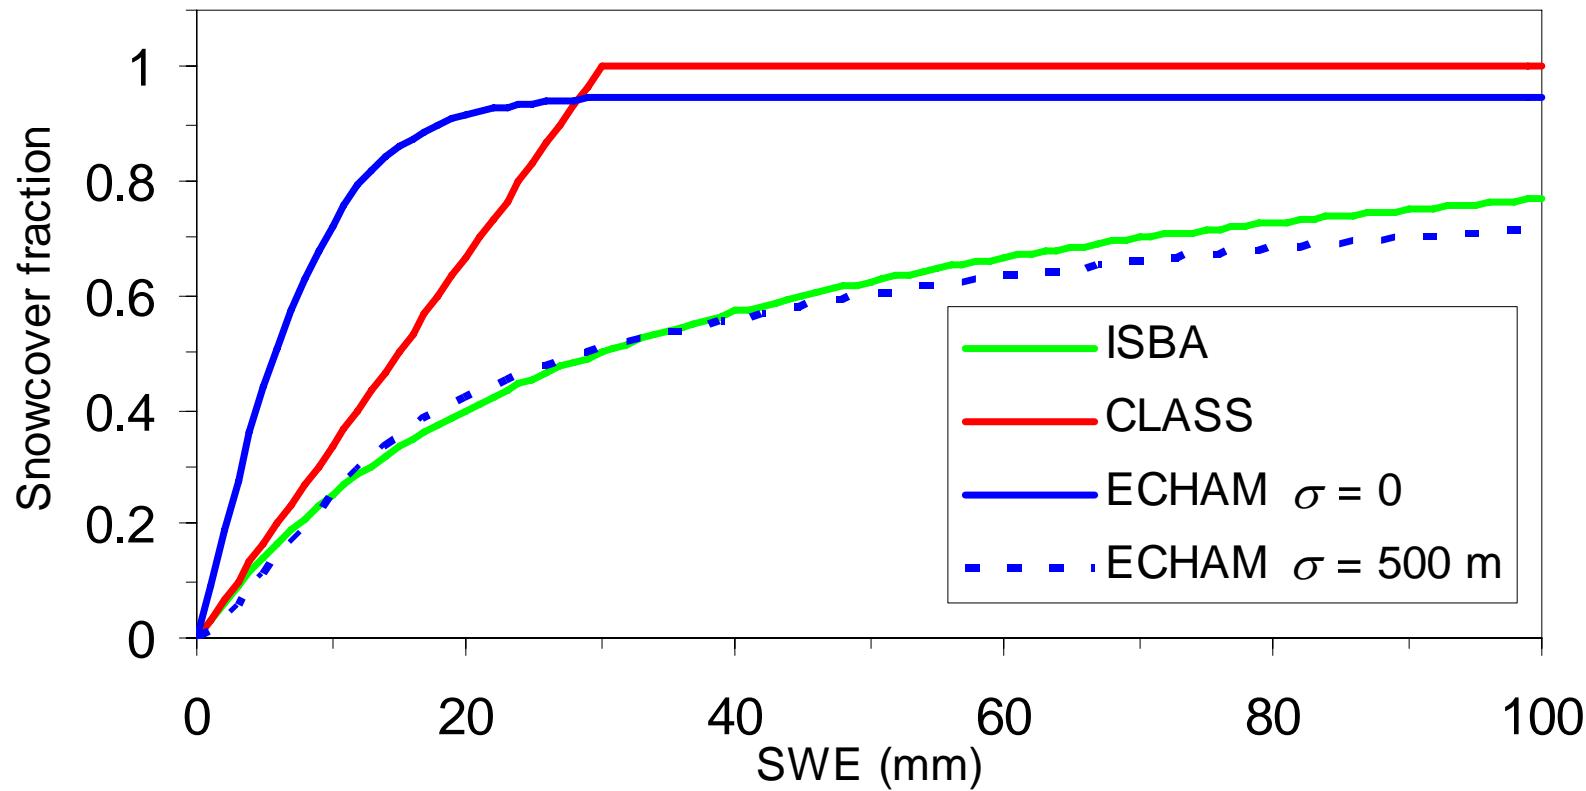

Snow albedo parametrization

$$\alpha(t + \delta t) = \alpha_{\min} + [\alpha(t) - \alpha_{\min}] \exp\left(-\frac{\delta t}{\tau}\right) + [\alpha_{\max} - \alpha(t)] \frac{S_f}{S_0}$$

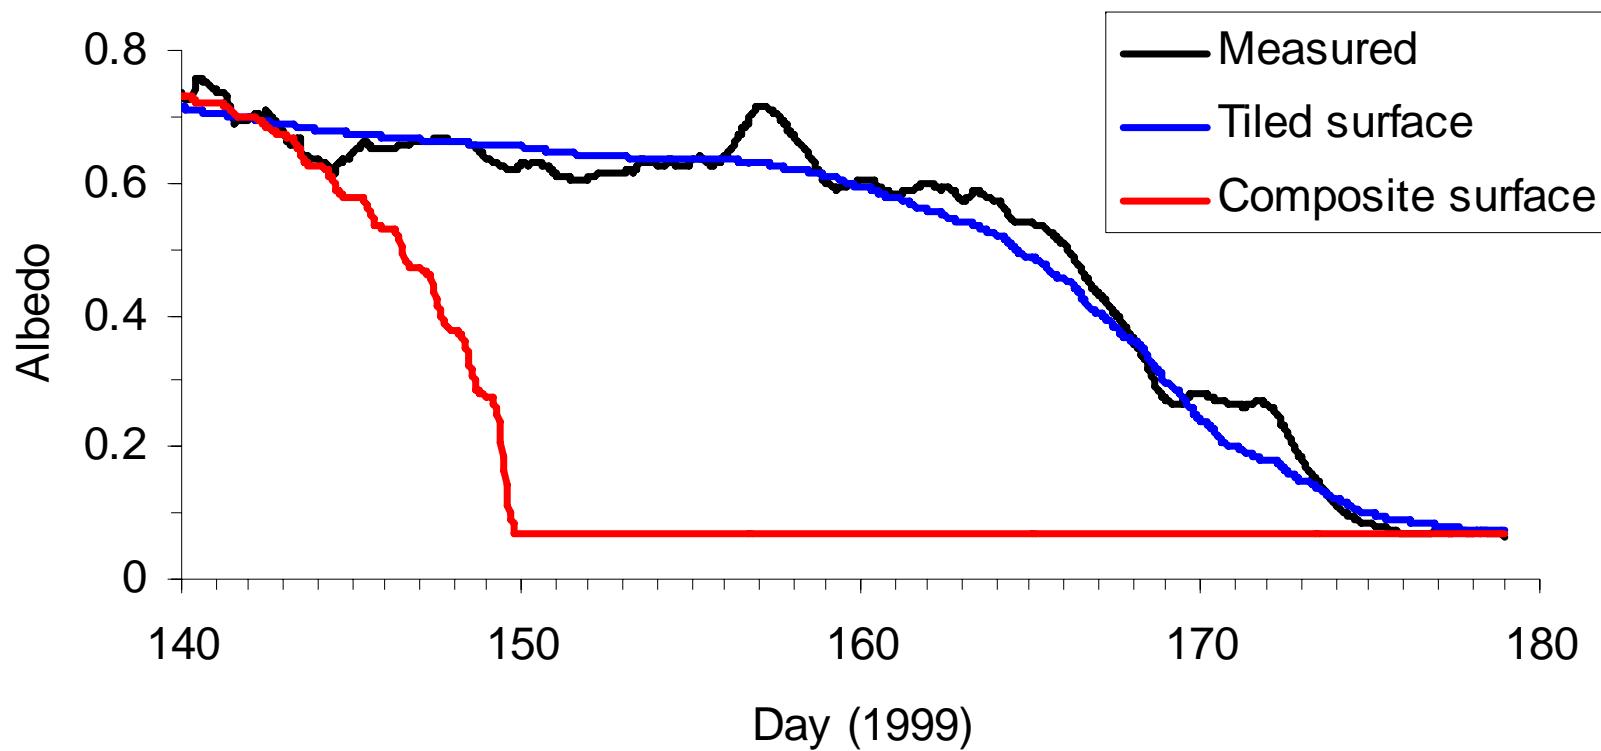

Snow fraction parametrization

$$f_s = \frac{S}{S + 5\rho z_0}$$

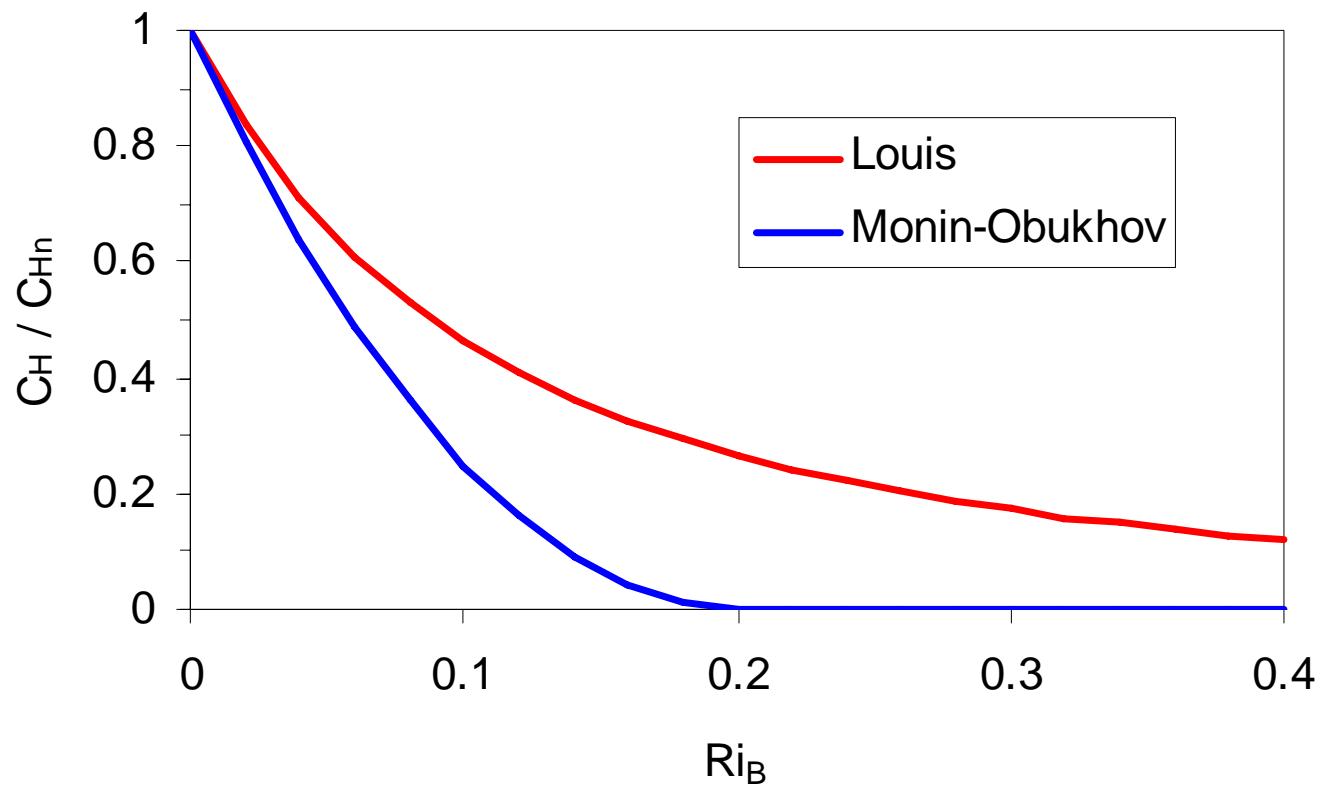

$$f_s = \min\left[\frac{10S}{\rho}, 1\right]$$

$$f_s = 0.95 \tanh(0.1S) \left(\frac{S}{S + 0.15\sigma_z} \right)^{1/2}$$

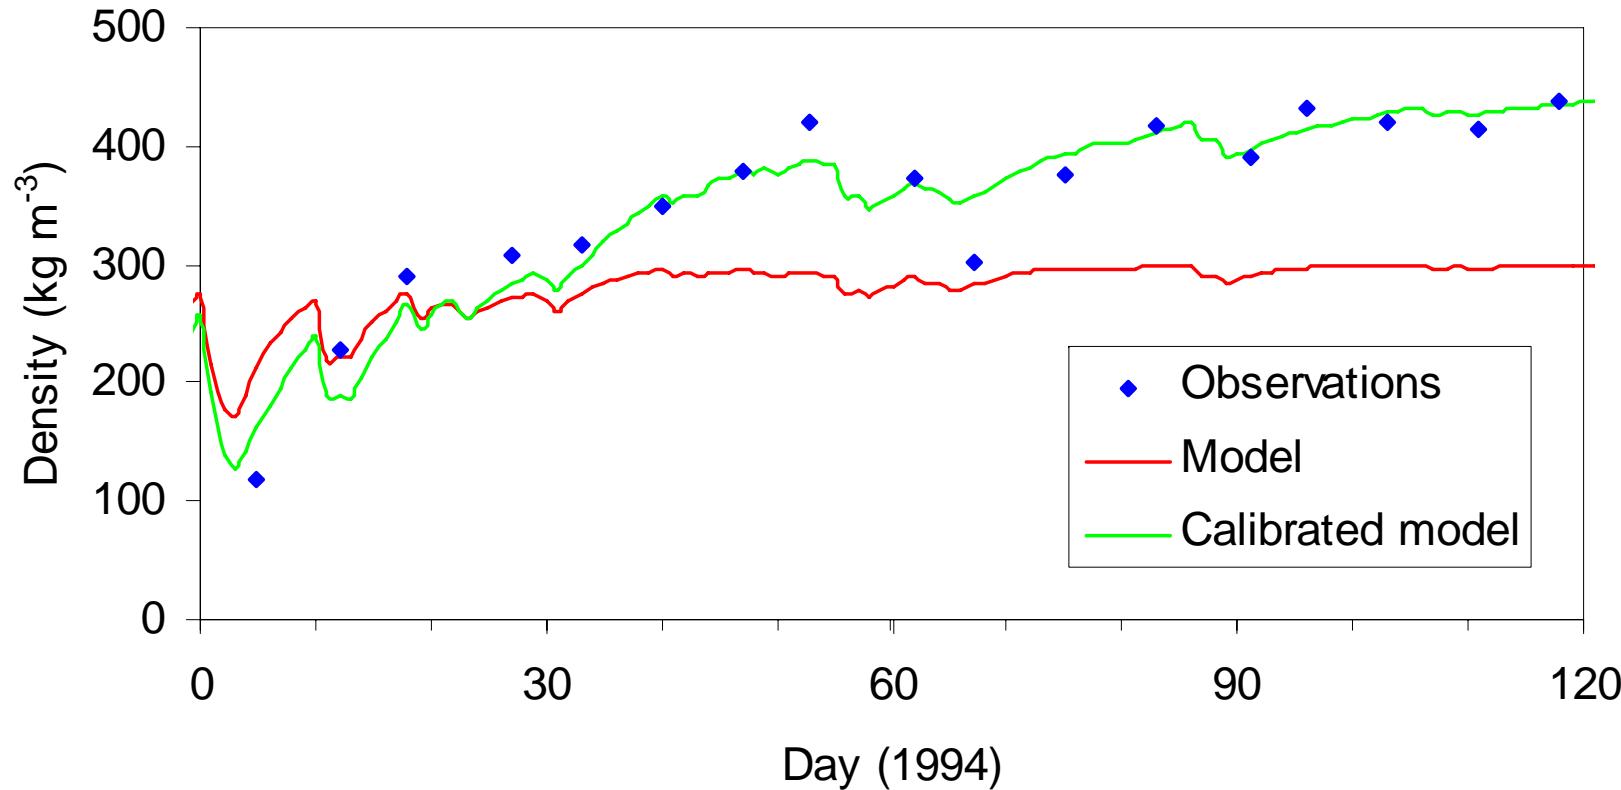

Essery, Blyth, Harding and Lloyd, 2005. *Nordic Hydrology*, **36**, 207 - 218

Stable exchange coefficients

After King and Connolley, 1997. *J. Clim.*, **10**, 1273 – 1287.

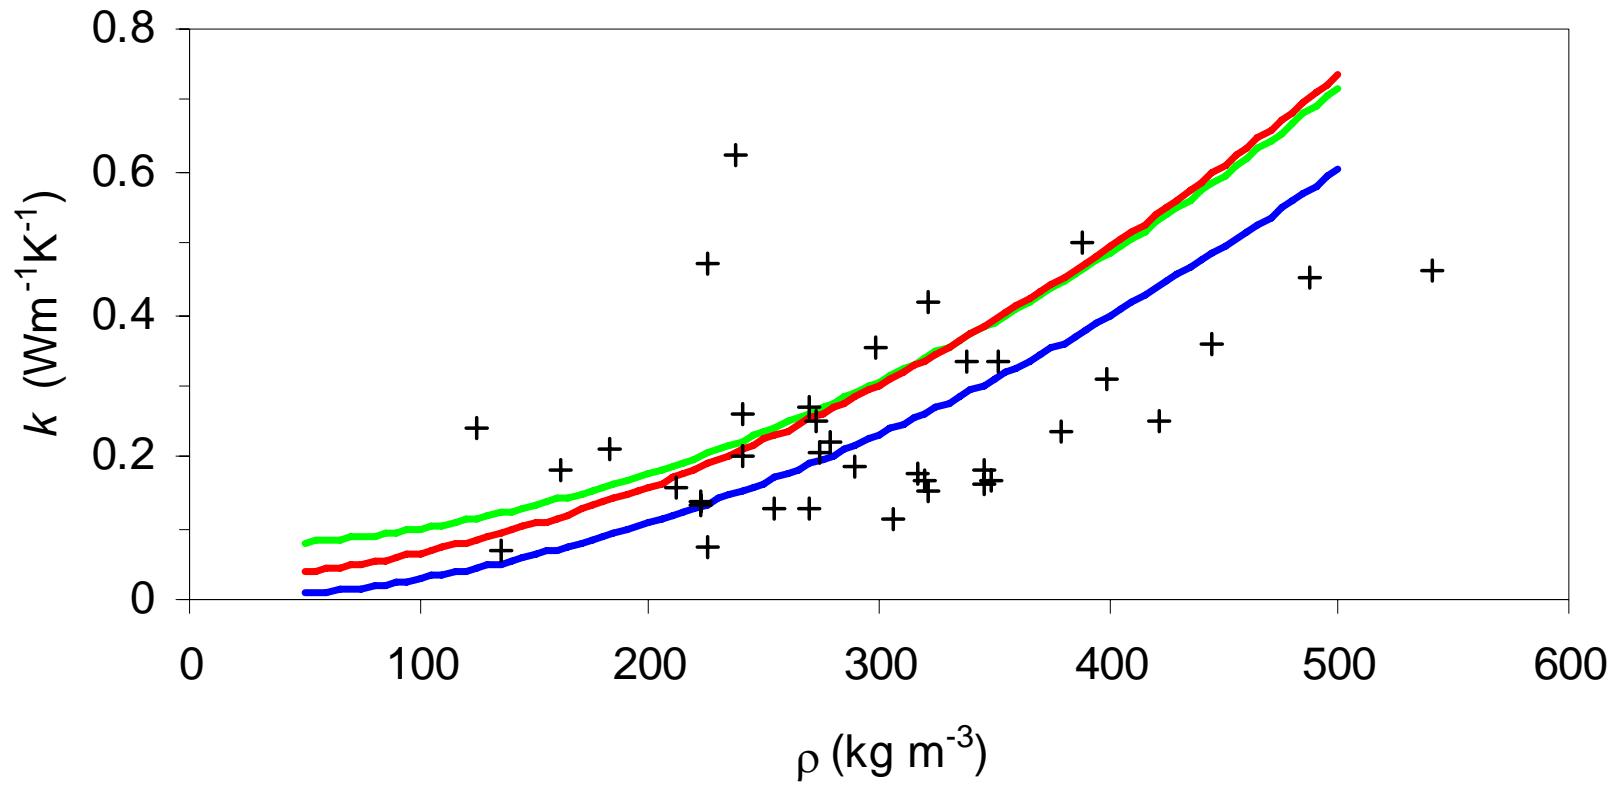

Snow density parametrization

$$\rho(t + \delta t) = \rho_{\max} + [\rho(t) - \rho_{\max}] \exp(-\delta t / \tau)$$

$$\rho(t + \delta t) = [S\rho(t) - S_f \rho_{\text{fresh}}] / (S + S_f)$$

Snow thermal conductivity

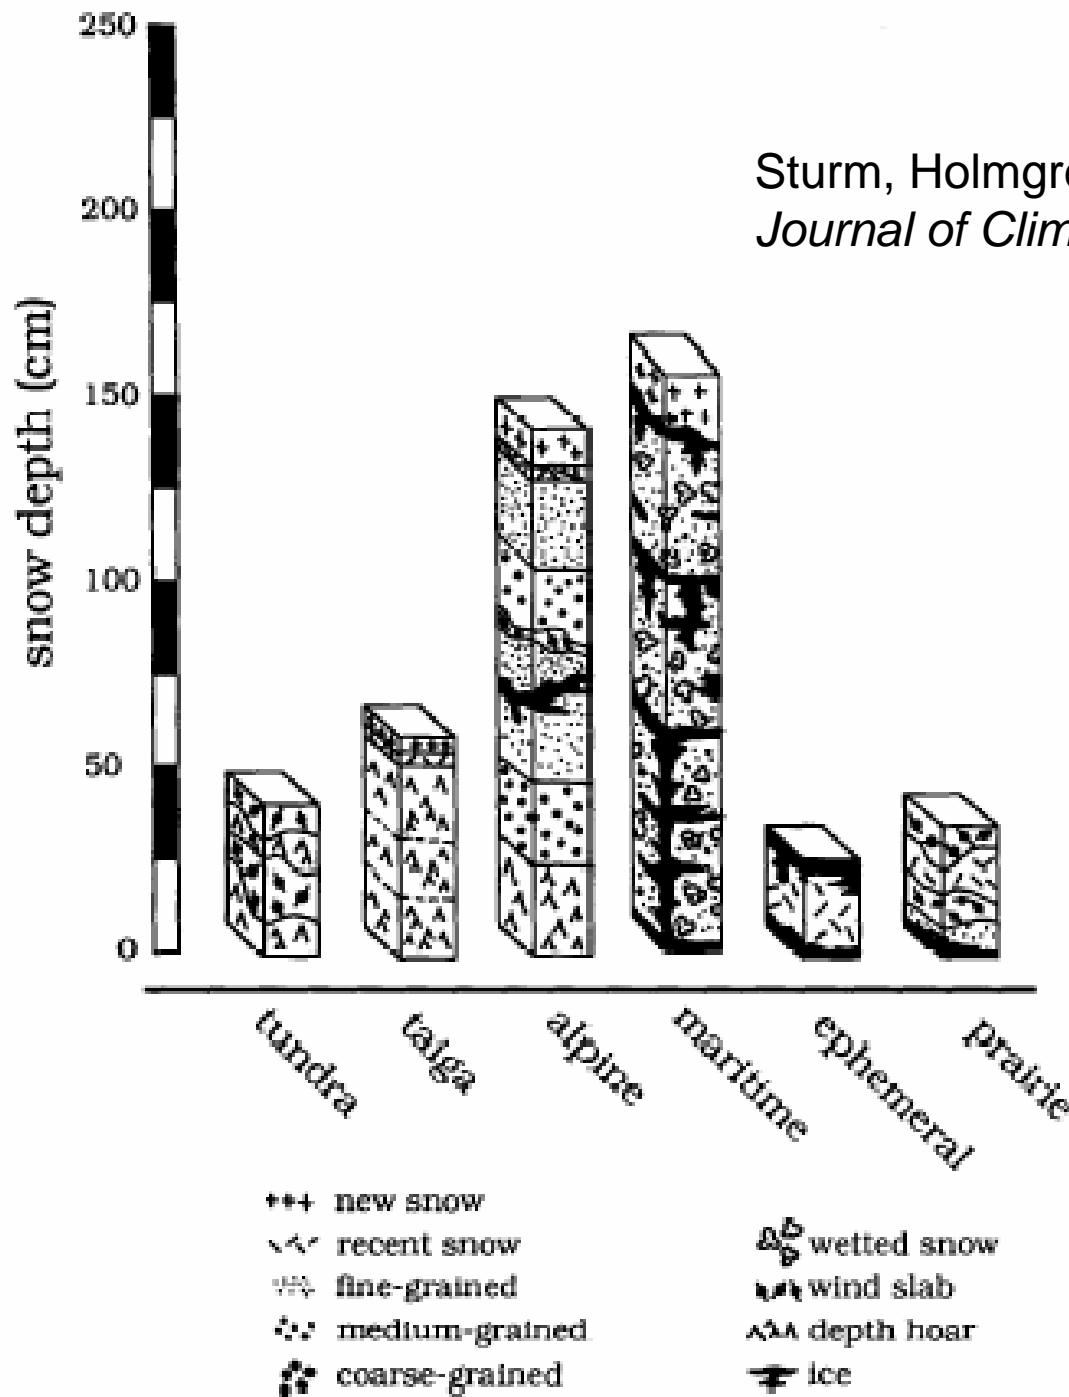

$$k = a + b\rho^2$$

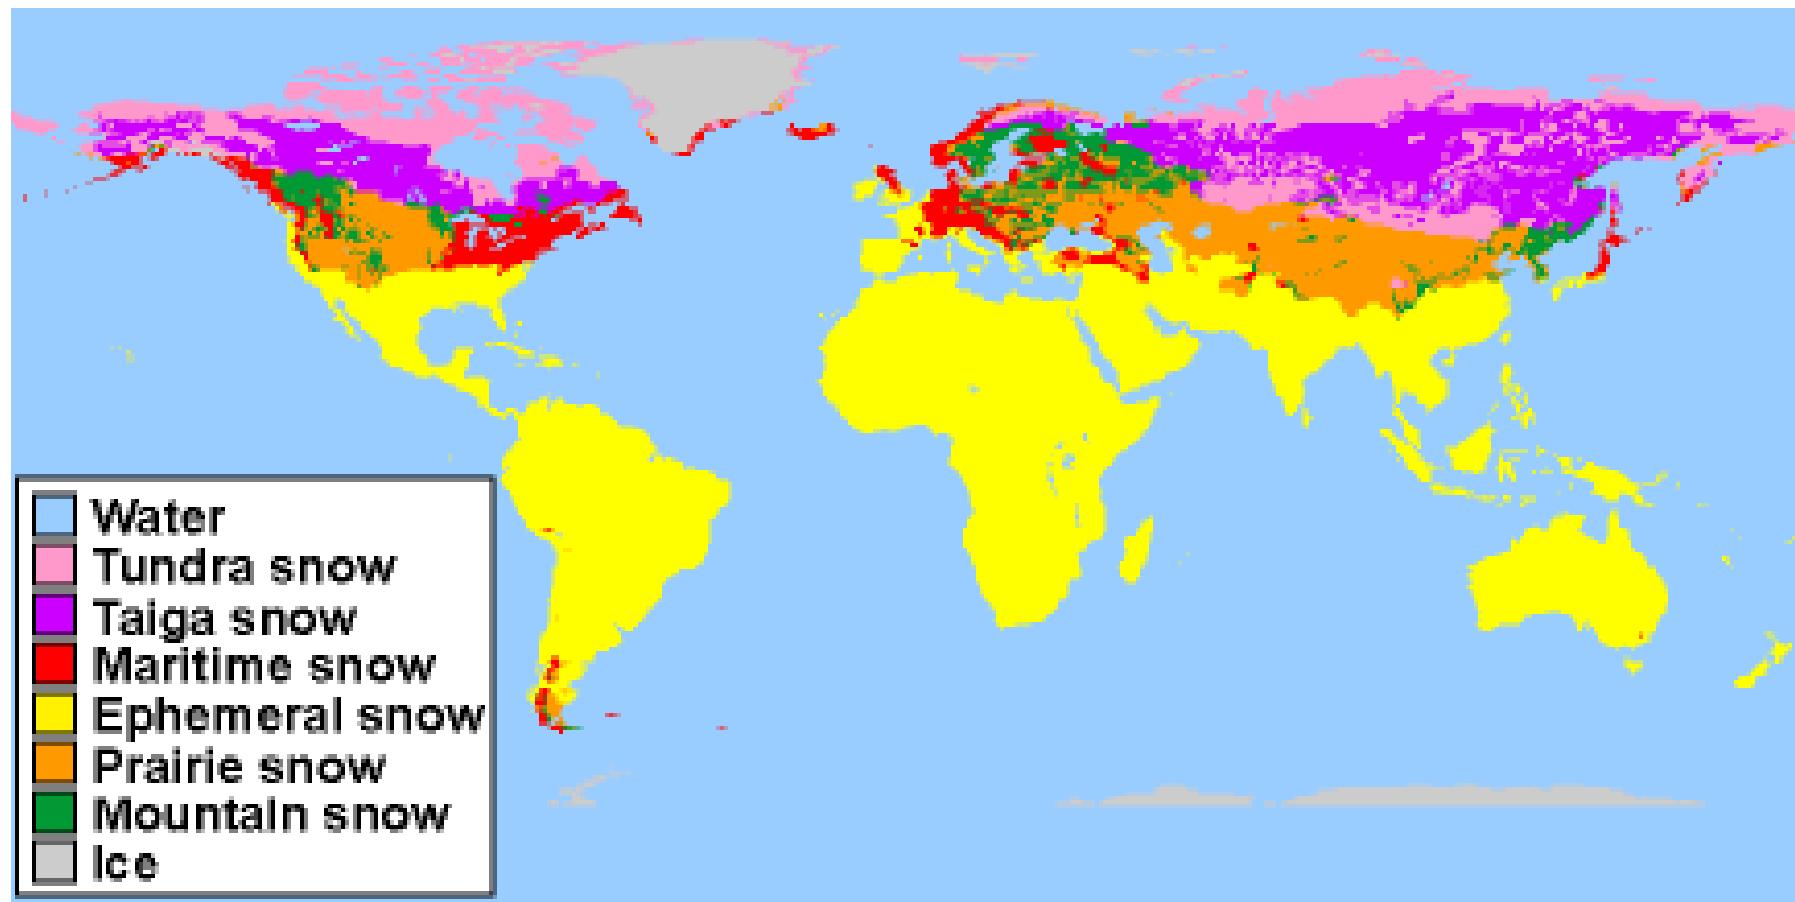

$$k = a + b\rho + c\rho^2$$

$$k = a\rho^b$$

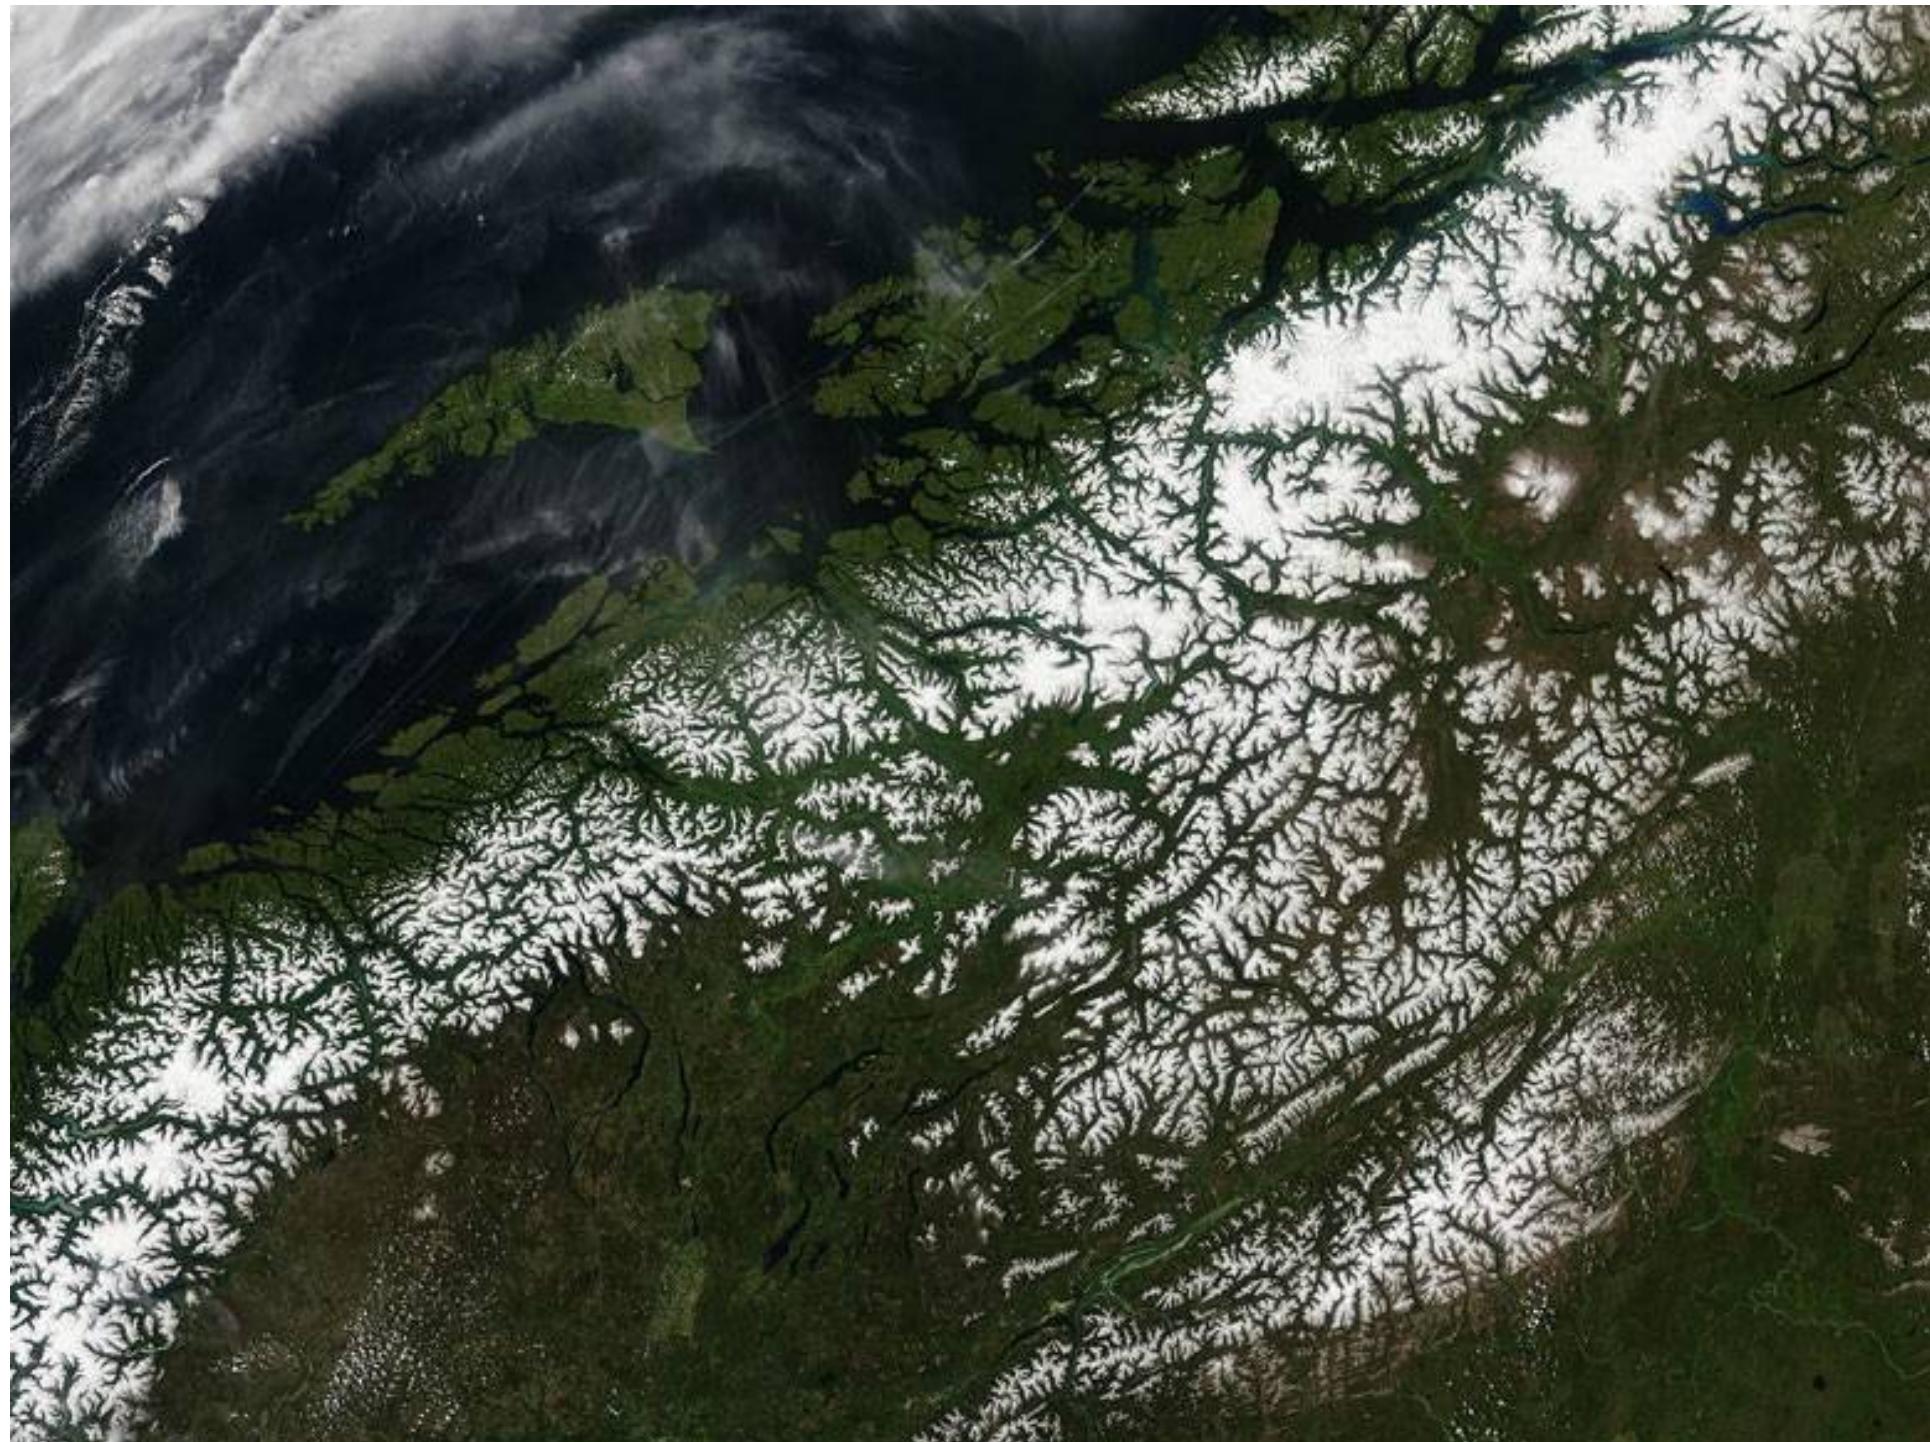

Observations from Sturm et al. (1997). *J. Glaciol.*, **43**, 26 - 41

Sturm, Holmgren and Liston, 1995.
Journal of Climate, 8, 1261-83.
